

# M490 HISTOSETTE® I

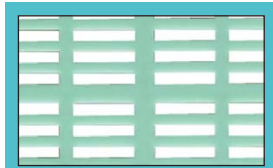

## TISSUE PROCESSING / EMBEDDING CASSETTES (with lid)

Made of acetal polymer

Disposable plastic cassettes hold tissue specimens during the embedding process, as well as in a storage file. Molded from a special high density polymer, these cassettes keep specimens safely submerged in liquid and are totally resistant to the chemical action of histological solvents. The efficient flow-through slots maximize fluid exchange and ensure proper drainage. The one-piece integral lid eliminates the need for separate steel lids. **Just snap apart and conveniently lock the lid into the base of the cassette.** They can be opened or closed as often as necessary and they always relock securely without danger of specimen loss. Large labeling areas are located on three sides of the cassette for your convenience. Anterior writing area at a 30° angle. Not suitable for automated printer.

The efficient flow-through slots maximize fluid exchange and ensure proper drainage.

Each case contains three dispenser boxes of 500 cassettes.

### ANATOMY OF A HISTOSETTE® I

The snap off lid can be easily removed, slid forward and snapped into the locked position.

Because it has efficient flow-through slots, fluid exchange and proper drainage are maximized.

Because it has a back mounted locking device, it will never open during processing.

Wider unobstructed writing surface sloped at 30° angle.

## BIOPSY PROCESSING / EMBEDDING CASSETTES (with lid)

Made of acetal polymer

Disposable plastic cassettes similar to Series M490 but specially designed to hold biopsy specimens during the embedding process, as well as in a storage file. Anterior writing area at a 30° angle.

Each case contains three dispenser boxes of 500 cassettes.
